

Magical Mysteries FUNshop

Grades 3-4

Is it magic, or is it science? Our budding scientists will investigate several seemingly magical events to discover if they really are magic – or if there is more happening than meets the eye. Come see why slime is attracted to magnets, and so much more!

Grades 5-6

Certain illusions help magicians appear to defy natural forces (such as gravity) and do the impossible! Students in this FUNshop will build a device to perform a floating object trick right from their own hands, and build and test a device that allows them to create and visualize holographic-like images. Along the way, students will discover the underlying STEM principles which allow these illusions to exist!

Two dates/locations
to choose from!

Friday, November 2

5:30 – 8:00 pm

Triad Middle School
9539 U.S. Hwy 40, St. Jacob

Friday, November 9

5:30 – 8:00 pm

BelleValley School
2465 Amann Drive, Belleville

- ▶ \$30/student (includes pizza, fruit, drink)
- ▶ Open to students from any school district
- ▶ Registration closes four days prior to each program, or when capacity is reached.

▶ ▶ ▶ Sign up here!
